

TPD2E001 Low-Capacitance 2-Channel ESD-Protection for High-Speed Data Interfaces

1 Features

- IEC 61000-4-2 ESD Protection (Level 4)
 - $\pm 8\text{-kV}$ Contact Discharge
 - $\pm 15\text{-kV}$ Air-Gap Discharge
- IO Capacitance: 1.5 pF (Typ)
- Low Leakage Current: 1 nA (Maximum)
- Low Supply Current: 1 nA
- 0.9 V to 5.5 V Supply-Voltage Range
- Space-Saving DRL, DRY, and QFN Package Options
- Alternate 3, 4, 6-Channel options Available: TPD3E001, TPD4E001, TPD6E001

2 Applications

- USB 2.0
- Ethernet
- FireWire™
- LVDS
- SVGA Video Connections
- Glucose Meters
- Medical Imaging

3 Description

The TPD2E001 is a two-channel Transient Voltage Suppressor (TVS) based Electrostatic Discharge (ESD) protection diode array. The TPD2E001 is rated to dissipate ESD strikes at the maximum level specified in the IEC 61000-4-2 Level 4 international standard.

The DRS package (3.00 mm x 3.00 mm) is also available as a non-magnetic package for medical imaging applications.

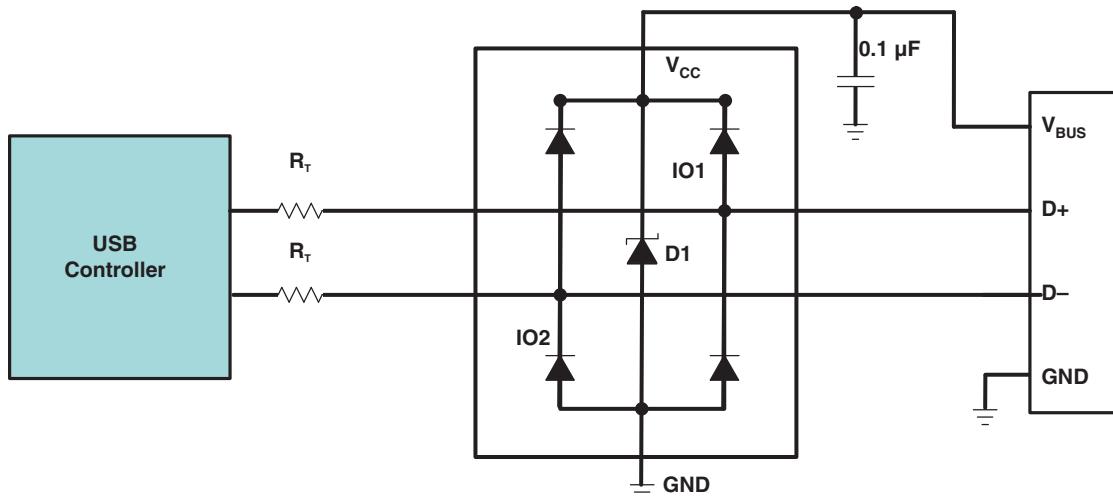

See also [TPD2E2U06DRLR](#) which is p2p compatible to TPD2E001DRLR and offers higher IEC ESD Protection, lower clamping voltage, and eliminates the input capacitor requirement.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPD2E001	SOT (5)	1.60 mm x 1.20 mm
	WSON (6)	3.00 mm x 3.00 mm
	USON (6)	1.45 mm x 1.00 mm
	SOP (4)	2.90 mm x 1.30 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Application Schematic

An IMPORTANT NOTICE at the end of this data sheet addresses availability, warranty, changes, use in safety-critical applications, intellectual property matters and other important disclaimers. PRODUCTION DATA.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

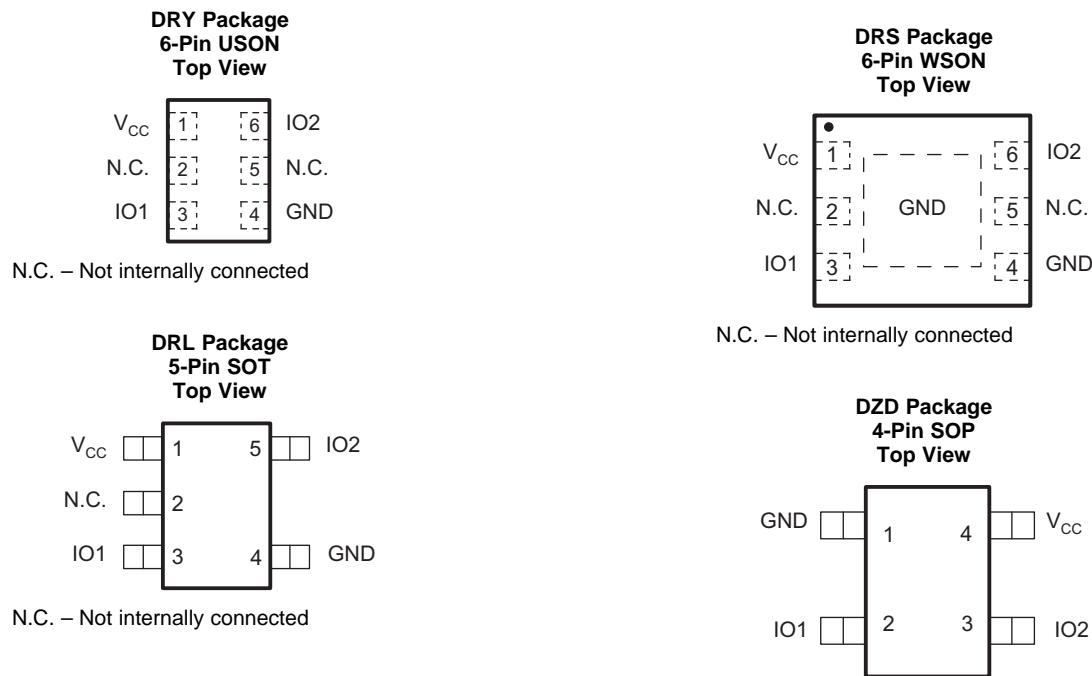

Changes from Revision H (August 2014) to Revision I		Page
• Updated the <i>ESDS</i> section		1
• Updated the <i>Handling Ratings</i> table to an <i>ESD Ratings</i> table and moved the T_{stg} to the <i>Absolute Maximum Ratings</i> table		4
• Added test condition frequency to capacitance		5
• Added note to the <i>Application and Implementation</i>		7
• Added <i>Community Resources</i>		9

Changes from Revision G (November 2013) to Revision H		Page
• Added <i>Pin Configuration and Functions</i> section, <i>Handling Rating</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section		1

Changes from Revision F (February 2012) to Revision G		Page
• Updated document formatting		1
• Updated Description		1
• Removed Ordering Information table		3

Changes from Revision E (June 2008) to Revision F		Page
• Added Medical Imaging to Applications		1
• Added "The 3x3 mm DRS package is also available as a non-magnetic package for medical imaging application." to the description		1
• Added 3 x 3 SON – DRS (Non-Magnetic) package to Ordering Information table		3

5 Pin Configuration and Functions

Pin Functions

NAME	PIN					DESCRIPTION
	DRY NO.	DRL NO.	DRS NO.	DZD NO.		
EP	—	—	EP	—		Exposed pad. Connect to GND.
GND	4	4	4	1		Ground
IOx	3, 6	3, 5	3, 6	2, 3		ESD-protected channel
N.C.	2, 5	2	2, 5	—		No connection. Not internally connected.
V _{CC}	1	1	1	4		Power-supply input. Bypass V _{CC} to GND with a 0.1- μ F ceramic capacitor.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V_{CC}	Power pin voltage	-0.3	7	V
V_{IO}	IO pin voltage	-0.3	$V_{CC} + 0.3$	V
T_J	Junction temperature		150	°C
Bump temperature (soldering)	Infrared (15 s)		220	°C
	Vapor phase (60 s)		215	
Lead temperature (soldering, 10 s)			300	°C
T_{stg}	Storage temperature	-65	150	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute-maximum-rating conditions for extended periods may affect device reliability.

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±15000	V
	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 ESD Ratings: Surge Protection

		VALUE	UNIT
$V_{(ESD)}$	IEC 61000-4-2 contact	±8000	V
	IEC 61000-4-2 air-gap discharge	±15000	

6.4 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
T_A , operating free-air temperature		-40	85	°C
Operating voltage	V_{CC} pin	0.9	5.5	V
	IO1, IO2 pins	0	V_{CC}	

6.5 Thermal Information

THERMAL METRIC ⁽¹⁾	TPD2E001				UNIT	
	DRY (USON)	DRL (SOT)	DRS (WSON)	DZD (SOP)		
	5 PINS	5 PINS	6 PINS	4 PINS		
$R_{\theta JA}$	Junction-to-ambient thermal resistance	374.2	257.6	91.9	213.7	°C/W
$R_{\theta JC(\text{top})}$	Junction-to-case (top) thermal resistance	223.4	97.6	106.9	93.5	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	227.8	74.2	64.8	56.8	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	52.9	7.5	10.2	4.2	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	224.8	73.7	64.9	56.4	°C/W
$R_{\theta JC(\text{bot})}$	Junction-to-case (bottom) thermal resistance	87.5	N/A	29.9	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.6 Electrical Characteristics

$V_{CC} = 5 \text{ V} \pm 10\%$, $T_A = -40^\circ\text{C}$ to 85°C (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
V_{CC} Supply voltage		0.9	5.5	5.5	V
I_{CC} Supply current		1	100	100	nA
V_F Diode forward voltage	$I_F = 10 \text{ mA}$	0.65	0.95	0.95	V
V_{BR} Breakdown voltage	$I_{BR} = 10 \text{ mA}$	11		11	V
V_C Channel clamp voltage ⁽²⁾	$T_A = 25^\circ\text{C}$, $\pm 15\text{-kV}$ HBM, $I_F = 10 \text{ A}$	Positive transients	$V_{CC} + 25$		V
		Negative transients	-25		
	$T_A = 25^\circ\text{C}$, $\pm 8\text{-kV}$ contact discharge (IEC 61000-4-2), $I_F = 24 \text{ A}$	Positive transients	$V_{CC} + 60$		
		Negative transients	-60		
	$T_A = 25^\circ\text{C}$, $\pm 15\text{-kV}$ air-gap discharge (IEC 61000-4-2), $I_F = 45 \text{ A}$	Positive transients	$V_{CC} + 100$		
		Negative transients	-100		
I_{IO} Channel leakage current	$V_{IO} = \text{GND to } V_{CC}$	-1	1	1	nA
C_{IO} Channel input capacitance	$V_{CC} = 5 \text{ V}$, bias of $V_{CC} / 2$; $f = 10 \text{ MHz}$	1.5		1.5	pF

(1) Typical values are at $V_{CC} = 5 \text{ V}$ and $T_A = 25^\circ\text{C}$

(2) Channel clamp voltage is not production tested.

6.7 Typical Characteristics

7 Detailed Description

7.1 Overview

The TPD2E001 is a two-channel transient voltage suppressor (TVS) based ESD protection diode array. The TPD2E001 is rated to dissipate ESD strikes at the maximum level specified in the IEC 61000-4-2 Level 4 international standard.

7.2 Functional Block Diagram

7.3 Feature Description

TPD2E001 is a uni-directional ESD protection device with low capacitance. The device is constructed with a central ESD clamp that features two hiding diodes per line to reduce the capacitive loading. This central ESD clamp is also connected to V_{CC} to provide protection for the V_{CC} line. Each IO line is rated to dissipate ESD strikes above the maximum level specified in the IEC 61000-4-2 level 4 international standard. The TPD2E001's low loading capacitance makes it ideal for protection high-speed signal terminals.

7.4 Device Functional Modes

TPD2E001 is a passive integrated circuit that activates whenever voltages above V_{BR} or below the lower diodes $V_{forward}$ ($-0.6V$) are present upon the circuit being protected. During ESD events, voltages as high as ± 15 kV can be directed to ground and V_{CC} via the internal diode network. Once the voltages on the protected lines fall below the trigger voltage of the TPD2E001 (usually within 10s of nanoseconds) the device reverts back to a high impedance state.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

TPD2E001 is a diode array type Transient Voltage Suppressor (TVS) which is typically used to provide a path to ground for dissipating ESD events on hi-speed signal lines between a human interface connector and a system. As the current from ESD passes through the TVS, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. The low R_{DYN} of the triggered TVS holds this voltage, V_{CLAMP} , to a tolerable level to the protected IC.

8.2 Typical Application

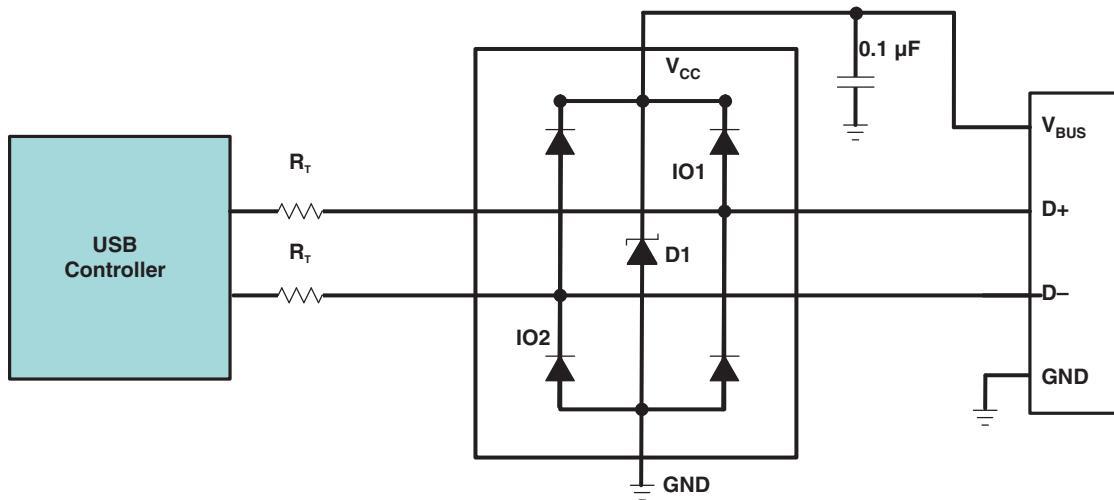

Figure 5. Typical USB Application Diagram

8.2.1 Design Requirements

For this design example, a single TPD2E001 is used to protect all pins of a USB 2.0 connector.

Given the USB application, Table 1 shows the Design Parameters:

Table 1. Design Parameters

DESIGN PARAMETER	VALUE
Signal range on IO1, and IO2	0 V to 5 V
Signal voltage range on V_{CC}	0 V to 5 V
Operating frequency	240 MHz

8.2.2 Detailed Design Procedure

To begin the design process, some parameters must be decided upon; the designer needs to know the following:

- Signal voltage range on all the protected lines
- Operating frequency

The V_{CC} pin can be connected in two different ways:

1. If the V_{CC} pin is connected to the system power supply, the TPD2E001 works as a transient suppressor for any signal swing above $V_{CC} + V_F$. A 0.1- μ F capacitor on the device V_{CC} pin is recommended for ESD

bypass.

2. If the V_{CC} pin is not connected to the system power supply, the TPD2E001 can tolerate higher signal swing in the range up to 10 V. Please note that a 0.1- μ F capacitor is still recommended at the V_{CC} pin for ESD bypass.

8.2.2.1 Signal Range on IO1 and IO2 and V_{CC} Pins

The TPD2E001 has 2 IO pins which support 0 to either 10 V or $V_{CC} + V_{forward}$ (depending on if the V_{CC} pin is connected to a V_{CC} line or has a 0.1 μ F capacitor to ground).

9 Power Supply Recommendations

This device is a passive ESD protection device and there is no need to power it. Care should be taken to make sure that the maximum voltage specifications for each line are not violated.

10 Layout

10.1 Layout Guidelines

- The optimum placement is as close to the connector as possible.
 - EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
 - The PCB designer needs to minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
- Route the protected traces as straight as possible.
- Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
 - Electric fields tend to build up on corners, increasing EMI coupling.

10.2 Layout Example

This application is typical of a differential data pair application, such a USB 2.0.

11 Device and Documentation Support

11.1 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community.* Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

11.2 Trademarks

E2E is a trademark of Texas Instruments.

FireWire is a trademark of Apple Computer, Inc.

All other trademarks are the property of their respective owners.

11.3 Electrostatic Discharge Caution

 This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

 ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

NOTES:

- All linear dimensions are in millimeters.
- This drawing is subject to change without notice.
- Publication IPC-7351 is recommended for alternate designs.
- Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
- Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
- Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
- Side aperture dimensions over-print land for acceptable area ratio > 0.66 . Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

DZD (R-PDSO-G4)

PLASTIC SMALL-OUTLINE

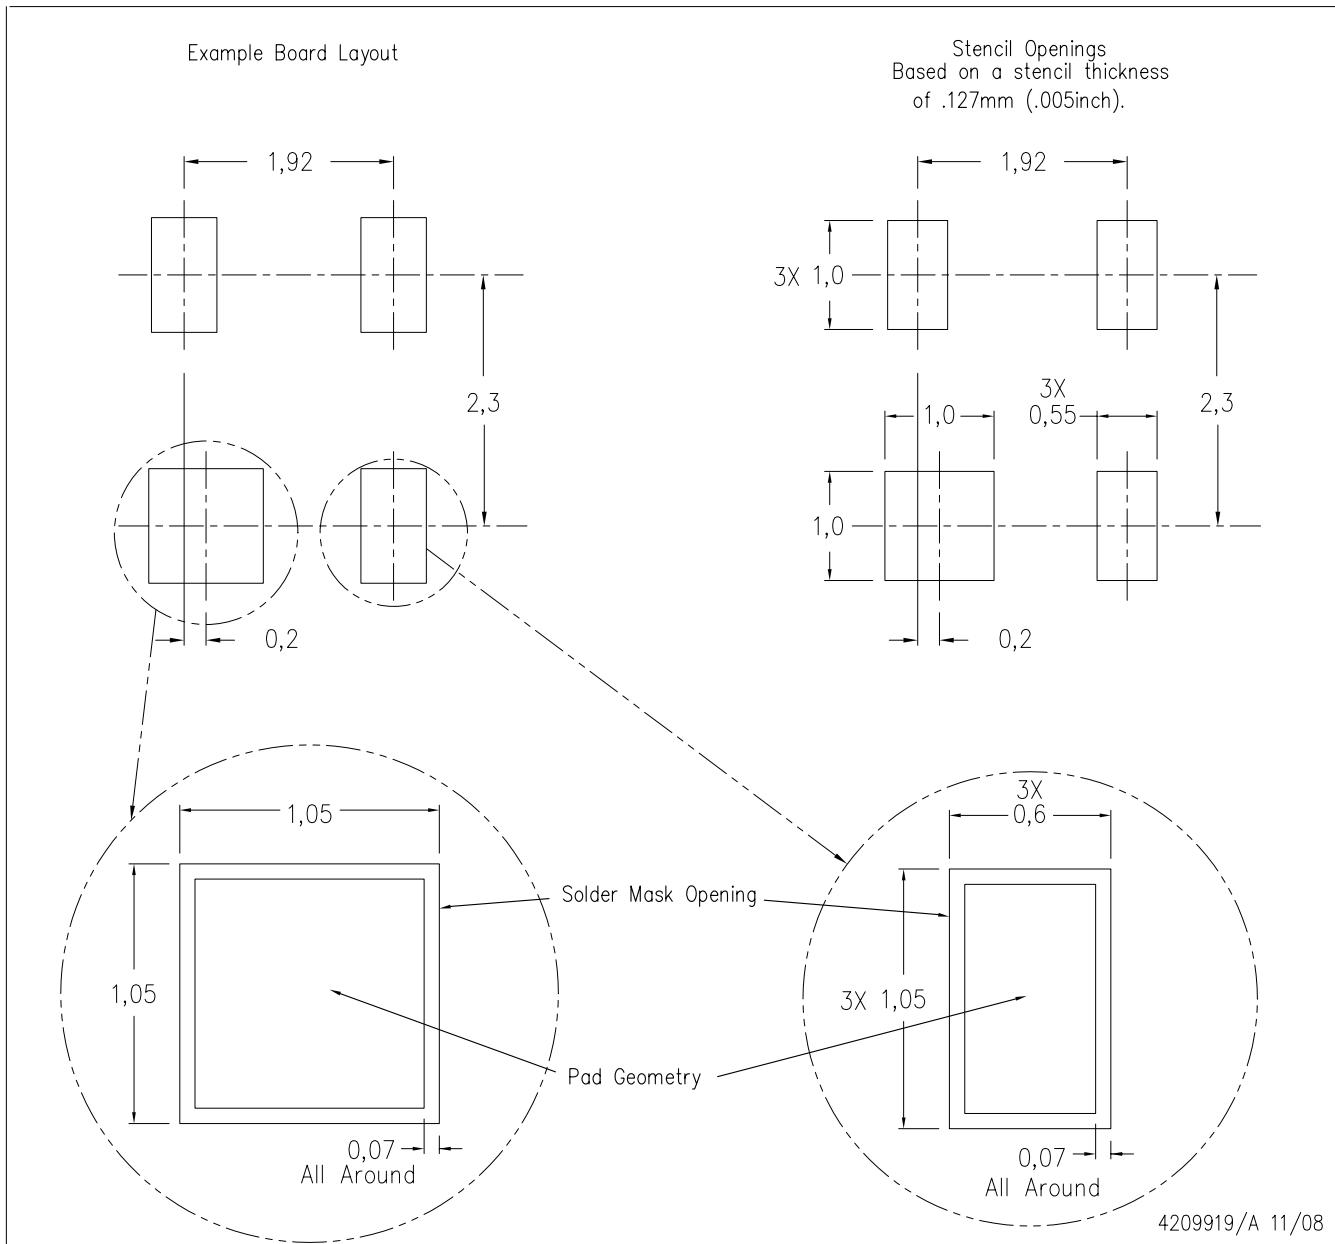

NOTES:

- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
- This drawing is subject to change without notice.
- Body dimensions do not include mold flash or protrusion. Mold flash and protrusion not to exceed 0.25 per side.

Falls within JEDEC TO-253 variation AA, except minimum foot length and minimum seating height.

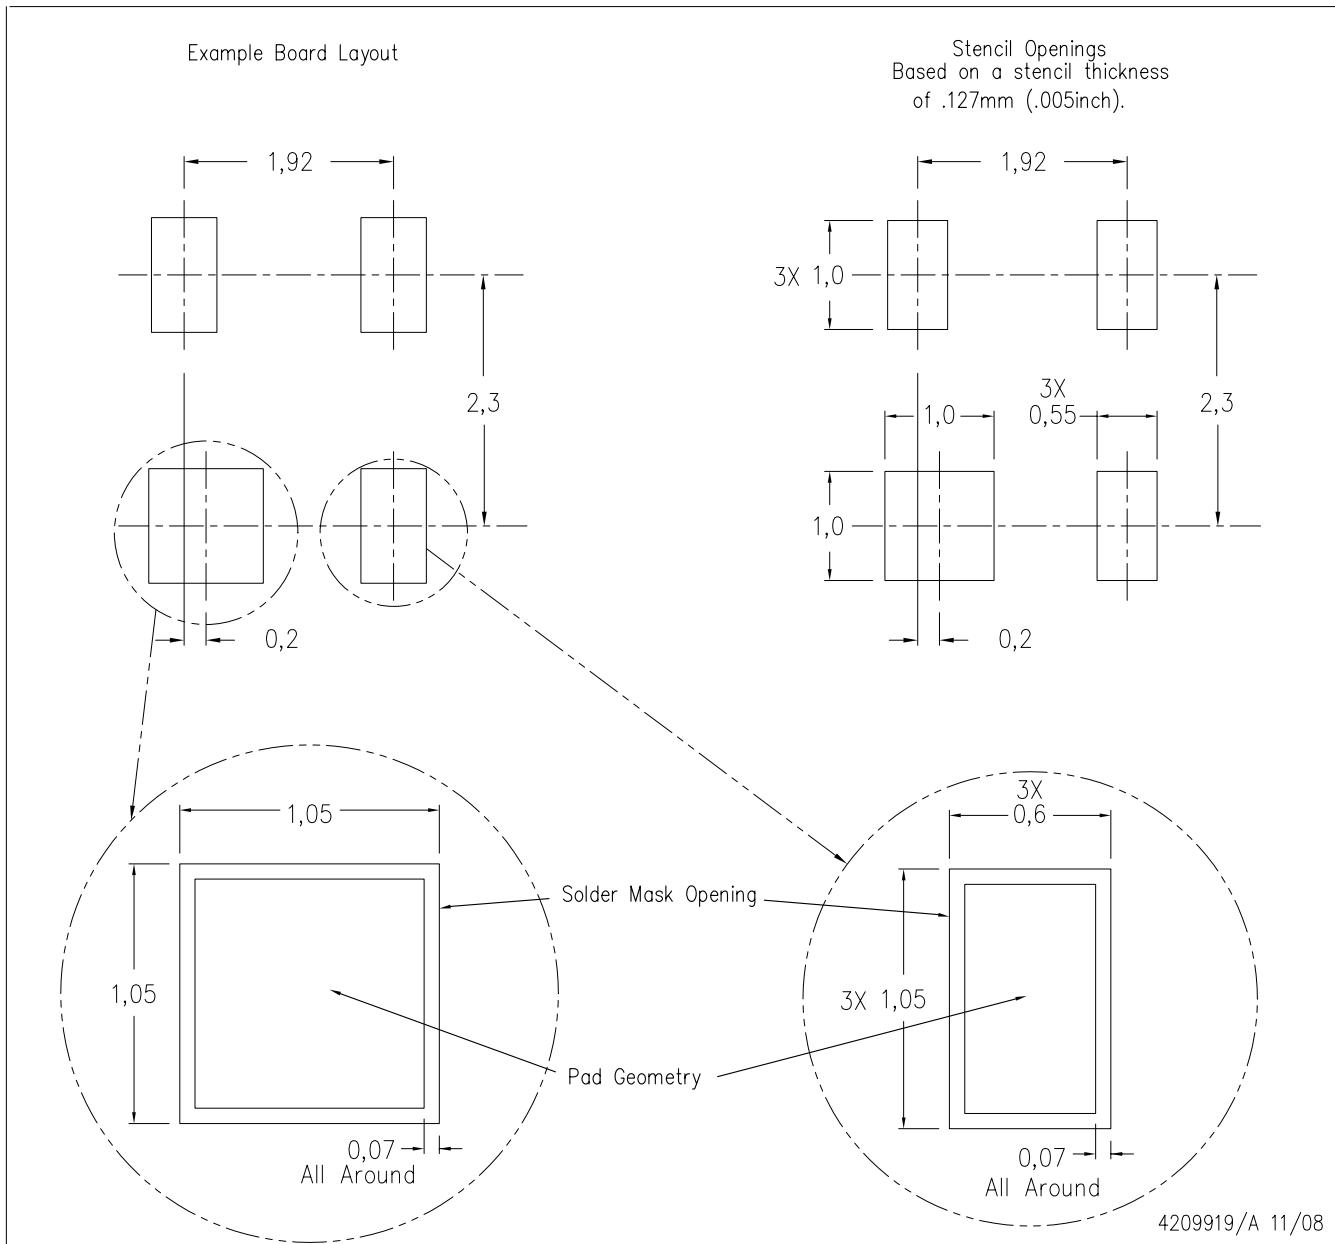

DZD (R-PDSO-G4)

NOTES:

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
- D. Publication IPC-7351 is recommended for alternate designs.
- E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
